Title

Energy Production and Consumption in Croatia

Expert

Dr Katarina Simon

Abstract

Energy resources include nuclear energy, fossil energy -- like oil, coal and natural gas -- and renewable sources like wind, solar and hydropower. These primary sources are converted to electricity, a secondary energy source, which flows through power lines and other transmission infrastructure to our home and business. In the presentation you will find some basic information about fossil energy resources – oil and gas – exploration, production, processing and transportation as well as shares of individual energy forms in total primary energy production in Croatia, and data about production and consumption of primary energy in Croatia.
