

## WEB SEMINAR ENERGY

### **LOUISE KARLBERG**

*Research Fellow at Stockholm Environment Institute*

Louise Karlberg, PhD, is Head of the Resources and Development Unit at the Stockholm Environment Institute (SEI). She has fifteen years of professional experience from research on environment and development, including five years as a manager. Her main research interests are in the fields of ecohydrology and environmental physics, with a special attention to water flows in terrestrial ecosystems. Water resources interventions in small scale agriculture in the tropics is one of her focus areas.

Recently, the quantifications of inter-linkages (nexus) between the agriculture, energy and water sectors and the environment has been the focus of her work, including facilitation of dialogue between multi-stakeholder groups in low-income countries. Louise has also been involved in water and land assessments for food and bioenergy production.
